

NEW EXTERNAL AMP UNIT **EA-SX**

With immediate effect we offer the option of an external amp unit for the models S2X, S3X, S4X and S5X in order to make flush mounting of these monitors easier. Connecting the mounted SX monitors becomes very convenient and space-saving thanks to recessed Speakon connectors on the rear of the monitors.

The respective external amp units and their control panels are mounted in a 19" (3U) rack enclosure. The electronic circuitry and the controls of these units are the same that can be found in all base models of the SX monitor range with fitted amplification.

To connect the monitors to the external amp unit you must use the ADAM Audio ready-made Speakon cables that can be ordered in either 5 or 10 meter lengths.
